interactive workspaces

Workflows

Build flows for
automating repetitive
tasks

Copilot Studio

Build agents for
conversational assistance

Apps. Flows. Agents.

Become an AI maker, building solutions in the flow of work to simplify and streamline local tasks that slow you down

App Builder

Build apps for interactive workspaces

Prompt: "Create an app for our podcast series where employees can submit episode ideas, vote on topics, and see the recording schedule."

Workflows

Build flows for automating repetitive tasks

Prompt: "Every Friday at 10am, send a Teams reminder to podcast hosts with next week's episode topics and guest list, pulled from our app."

Copilot Studio

Build agents for conversational assistance

Prompt: "Build an agent that answers podcast-related questions - like how to submit an idea, when the next episode is, or how to join as a guest - using our internal wiki and calendar."

App Builder

- **Build interactive, no-code apps** in minutes to boost personal and team productivity
- Start quickly using your **existing data and documents** from Microsoft Graph.
- Store app data in Microsoft 365 for **instant deployment** in Microsoft 365 Copilot.
- **Easily share with coworkers** like you would a document and launch them within Microsoft 365 Copilot – with security and governance baked in.
- Option to start with **runnable code generated in Copilot Pages** – test and edit with Copilot, and deploy through App Builder or publish your Page to Power Apps for pro-code tools and enterprise capabilities.

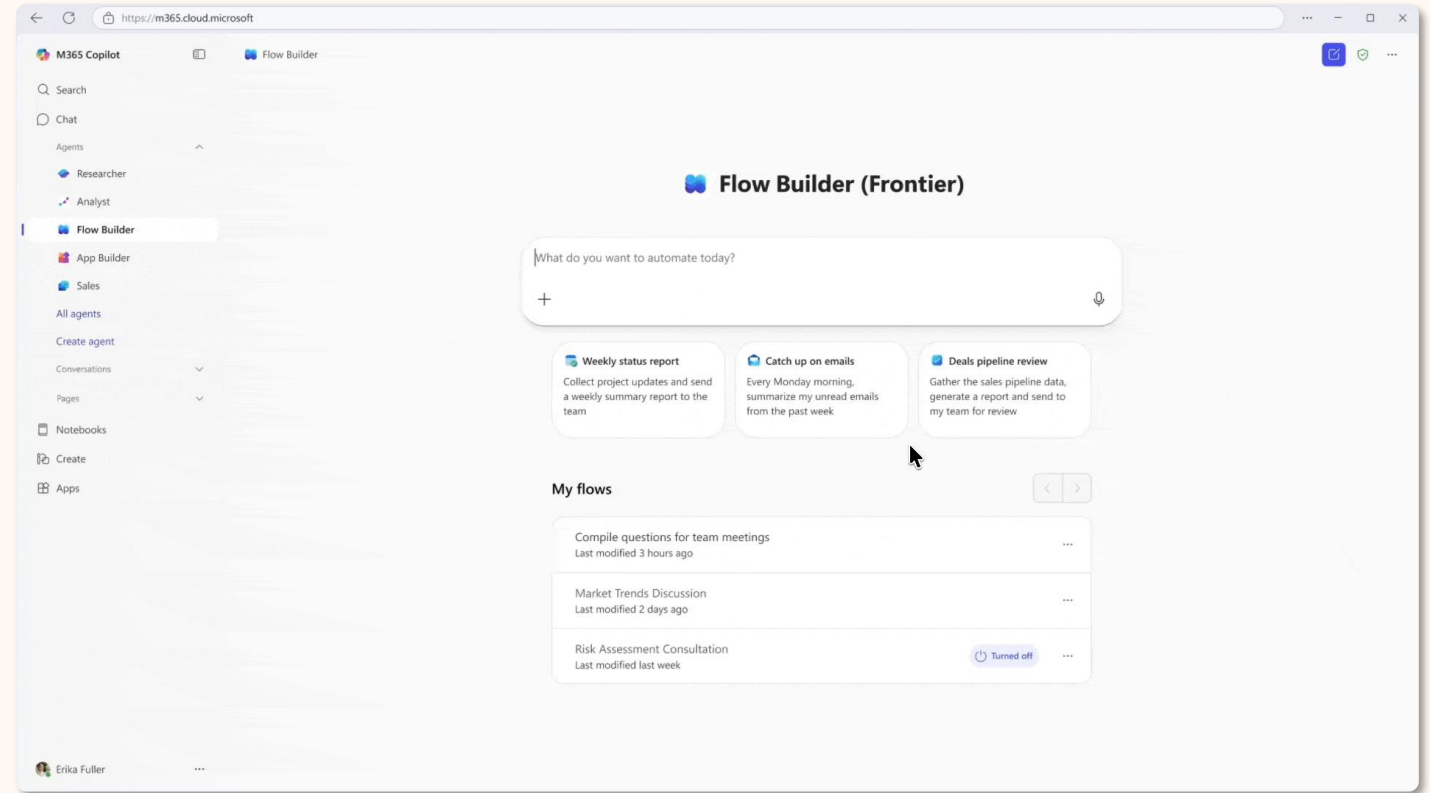

Try this prompt: "Create an app for our podcast series where employees can submit episode ideas, vote on topics, and see the recording schedule."

Build apps in Microsoft 365 Copilot

Workflows

- **Create flows in Microsoft 365** just by using your words in chat
- **Build, save, test, and run flows** all within Microsoft 365 Copilot
- **Boost personal and team productivity** with quick scenarios like daily triage, weekly digests, and lightweight approvals
- **Manage and edit active flows** directly within Microsoft 365 Copilot

Try this prompt: *"Every weekday at 9 AM, summarize my unread emails and send me a digest in Teams."*

Build flows in Microsoft 365 Copilot

Flow Builder > Bug Email Auto-Reply and Notif...

When I receive an email with the subject "bug", automatically reply to the sender with a thank-you and confirmation I'm on it. Then send me a message in Flow bot that summarizes the email (sender, subject, key details, deadlines) and confirms my follow-up.

Flow Builder

- ✓ **Naming the plan**
Setting a clear name for your flow to reflect its purpose: auto-reply and notify for bug emails.
- ✓ **Adding trigger for new bug email**
Setting up the flow to start when you receive a new email with 'bug' in the subject.
- ✓ **Auto-reply step setup**
Next, I will add a step to automatically reply to the sender with a thank-you and confirmation message when a bug email is received.
- **Teams notification step**
Now I will add a step to send you a summary of the bug email and confirmation of your follow-up in Flow bot.

Message Flow Builder

Flow

Activity

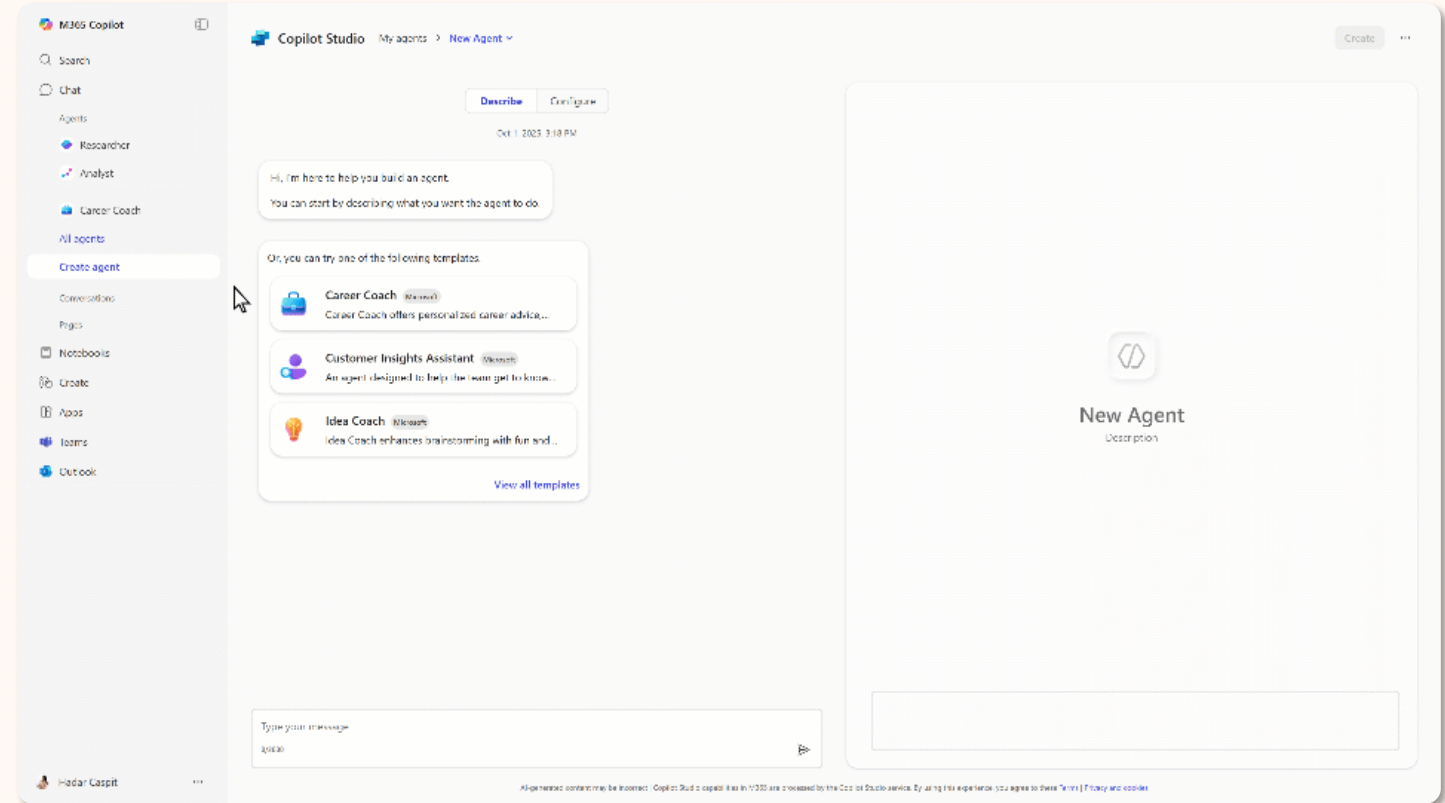

Trigger Office 365 Outlook
1. New Bug Email Received
When a new email arrives (V3)

Office 365 Outlook
2. Reply to Bug Email
Reply to the sender of the email in **New Bug Email Received**. I have received your email and will look reporting this bug. I have received your email and will look

Microsoft Teams
3. Send Bug Email Summary to Flow bot
Post a message to Hadar Caspit in Flow bot with a summary of the bug email. **Received:** include sender, subject, key details, and a confirmation of your follow-up on the bug.

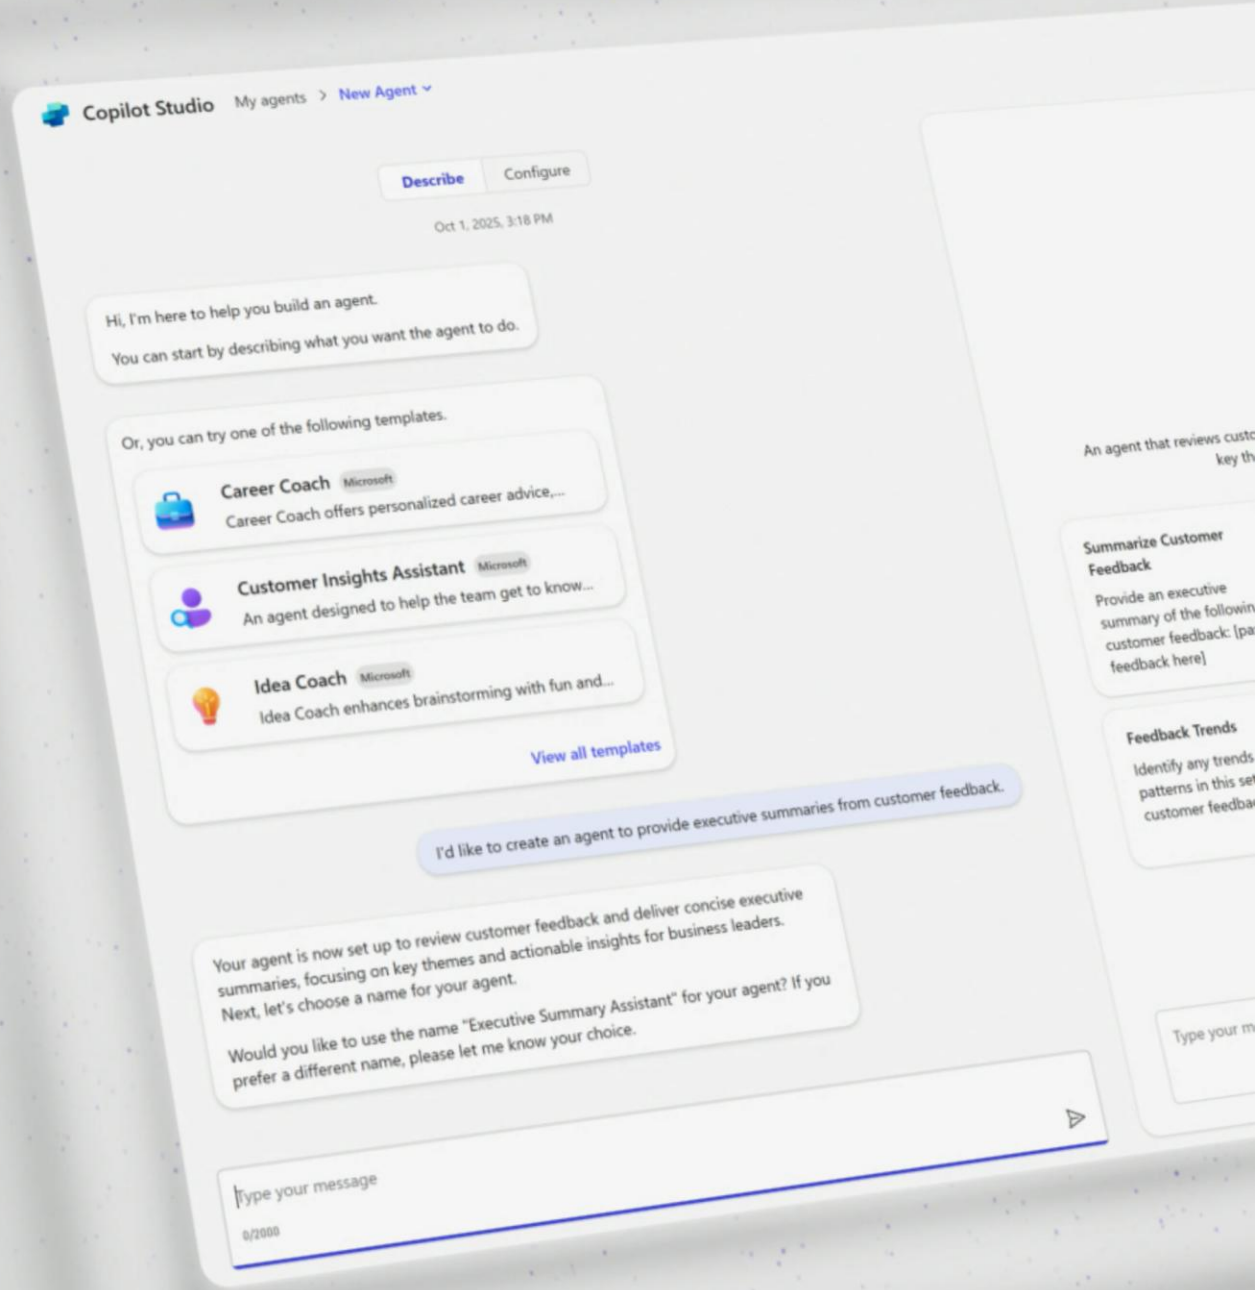

Agents

- Build **personalized, work-grounded agents using your words**—Copilot Studio makes it simple for anyone.
- Connect to your Microsoft **work graph**—SharePoint, Teams, Outlook—and **external systems**.
- **Test, refine, publish, and share** with your team when ready, always **honoring access permissions**.
- Runs on Microsoft 365 Copilot's **secure, compliant foundation** for **enterprise-grade reliability**.

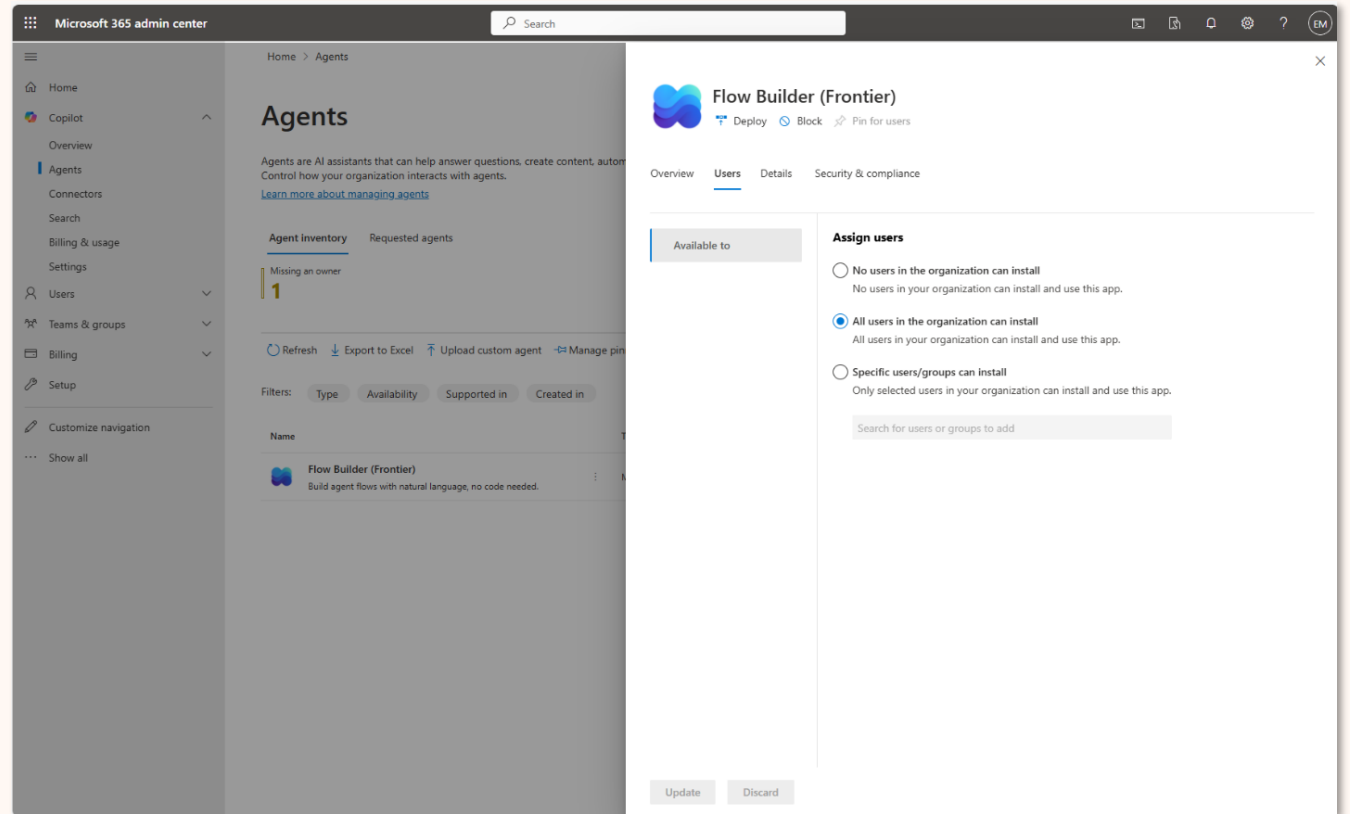

Try this prompt: *"Build an agent that helps employees quickly find information from internal product manuals, wikis, and technical documentation. It should provide clear, step-by-step answers and link to relevant resources when needed."*

Build agents in Microsoft 365 Copilot

Management

- **Secure by Design:** Copilot Studio, Flow Builder, and App Builder in Microsoft 365 Copilot operate within the user's context and follow role-based access controls (RBAC) for governance and compliance.
- **Admin Control:** Administrators can manage access to these tools in the agent inventory section of the Microsoft 365 admin center, enabling group-level permissions so only approved users can create and use agents.

Build **apps** in Microsoft 365 Copilot with App Builder

1. Open the [Microsoft 365 Copilot](#) app.
2. Go to 'All agents' to access Agent Store.
3. Search for "App Builder," and select 'App Builder (Frontier)'.
4. Click 'Add' in the agent card, and pin it to your favorite agents.
5. Describe the app you want to build and then click 'Send'. For example:

Build an agent that helps employees quickly find information from internal product manuals, wikis, and technical documentation. It should provide clear, step-by-step answers and link to relevant resources when needed.

Build **flows** in Microsoft 365 Copilot with Workflows

1. Open the [Microsoft 365 Copilot](#) app.
2. Go to 'All agents' to access Agent Store.
3. Search for "Workflows," and select 'Workflows (Frontier)'.
4. Click 'Add' in the agent card, and pin it to your favorite agents.
5. Describe the flow you want to build and then click 'Send'. For example:

Every weekday at 9 AM, summarize my unread emails and send me a digest in Teams.

Build **agents** in Microsoft 365 Copilot with Copilot Studio

1. Open the [Microsoft 365 Copilot](#) app.
2. Go to 'Create Agent'.
3. Describe what you want the agent to do and then click 'Send'. For example:

Build an agent that helps employees quickly find information from internal product manuals, wikis, and technical documentation. It should provide clear, step-by-step answers and link to relevant resources when needed.

4. Follow the prompts to create your agent.
