

Microsoft 365 Copilot and Teams Rooms Playbook

Get more out of hybrid meetings with Copilot and Teams Rooms with *speaker recognition* and *facilitator agent*

May 2025

Agenda

1 Copilot and Teams Rooms Overview

2 Enablement Step-by-Step:

- Teams Rooms Speaker recognition
 - Facilitator agent in Teams and Teams Rooms
-

3 Key Resources

More intelligent, inclusive, and productive hybrid meetings

Get more out of hybrid meetings with Copilot and Teams Rooms

Copilot and Teams Rooms

- Enhances **every meeting space for more productive meetings.**
- Identifies every voice and person in the meeting room, enabling **Copilot in Teams intelligent meeting recap.**
- Brings speaker recognition to your meeting rooms for **more insightful meetings.**
- Attributes speaker's words to the meeting transcript, **enabling AI-powered capabilities.**

Know who's talking when with attributed transcription

Powered by speaker recognition

Speaker recognition identifies every voice and person in the meeting room, enabling **Copilot in Teams and intelligent meeting recap**.

Achieve speaker recognition with **intelligent speakers or your existing hardware**.

Focus on what matters and eliminate note-taking distractions.

Biometric data is encrypted and protected by Microsoft's security and privacy policies and practices.

It's very exciting. I've already been thinking about some ways the buildings can be designed.

Kiana Anderson (Conf room 1234) 11:23 AM
We're off to a great start. Let's keep the momentum going.

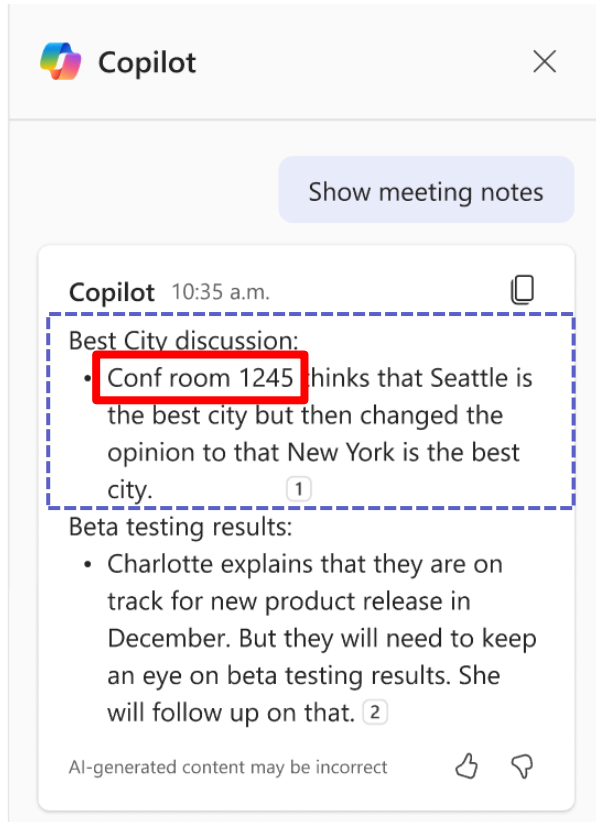

Quinn Campbell (Conf room 1234) 11:24 AM
I'm going to follow up after this meeting with the client.

The most essential input for Copilot in Teams is the identity of each speaker !

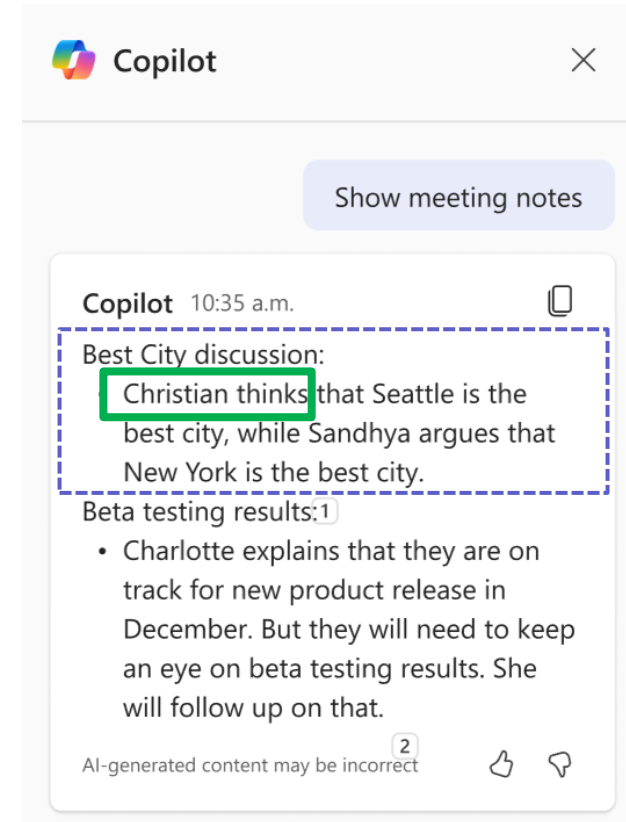

- Spot and fix **BLINDSPOTS** in your customer's Copilot strategies
- Copilot needs a meeting transcript, with attribution for every speaker, to deliver meeting summaries, insights, and action items.

Speaker Recognition from Rooms Copilot during a meeting

✗ Copilot without speaker recognition set up and/or no voice enrolled, audio will be attributed to the room

✓ Copilot with Speaker recognition set up with voice enrolled, individuals in the conference room will each be attributed by name

Speaker Recognition from Rooms – Intelligent Recap (After meeting)

Facilitator agent for Teams Rooms

Facilitator takes real-time notes from the room **even without a scheduled Teams meeting.**

Public Preview

Facilitator agent: Real-time notes in Teams Rooms

- **Facilitator takes real-time notes from the room*** even without a scheduled Teams meeting.
- **In-person meetings get a boost from AI.** All attendees can be in person, without their PCs or a Teams meeting in session, and the Facilitator will take notes for them.
- **It's easy and fast to start.** Simply press AI-generated notes, authenticate, and Facilitator will join any ad-hoc meeting.

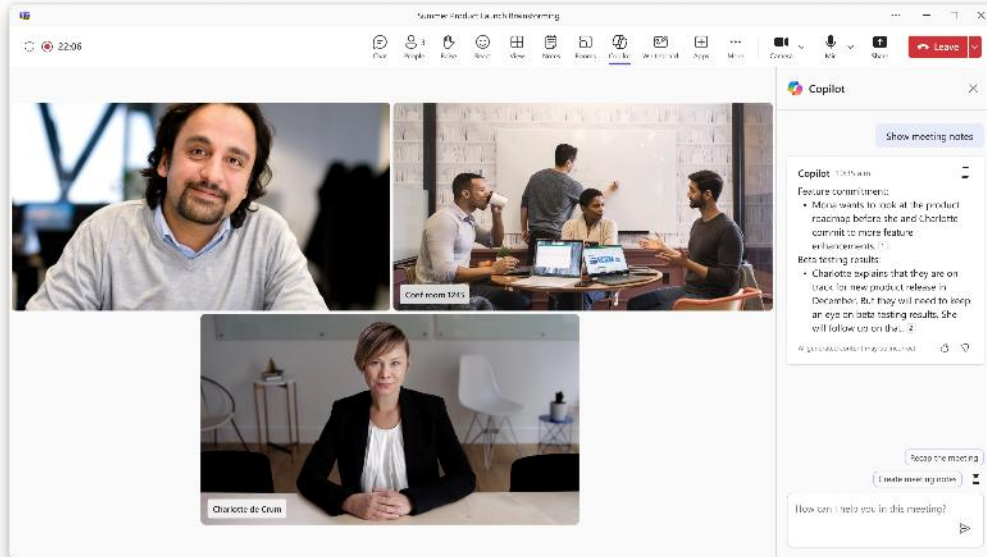

Facilitator will join the meeting to take notes for you

Speaker recognition for Teams Rooms: Setup overview

Within an organization, there are several settings IT admins need to verify that they're turned on or turn on to let end users get the full advantages of Copilot and Microsoft Teams Rooms.

Specifically, IT admins needs to verify speaker recognition support for their Teams Rooms devices, verify voice enrolment is turned on for users to be able to set up their voice recognition profile in Teams app, enable speaker recognition on Teams Rooms account and users have enrolled their voice profile in the Teams app and understand the meeting requirements for speaker recognition.

Teams Rooms speaker recognition setup

1. Verify Speaker recognition requirements for Teams Rooms

Verify speaker recognitions requirements for Teams Rooms and evaluate using existing hardware or incorporate a certified intelligent speaker

Teams Rooms: Speaker recognition requirements and recommendations

- ❑ Room resource account should have a Teams Room Pro license assigned.
- ❑ A supported Teams Rooms app is required to support intelligent Speakers to work with all certified microphones. Please check the software release notes [here](#)
- ❑ For identification to work, the participant being identified needs to be enrolled with their voice profile and invited to the scheduled Teams meeting.
- ❑ The current maximum number of invited participants is 20 for identification to work.
- ❑ Evaluate existing hardware or incorporate a certified intelligent speaker

2. Verify voice enrollment in Microsoft Teams app is turned on

By default, voice and face enrollment is enabled for all users in the organization, but admins can change this setting using PowerShell so should be verified.

Powershell

```
Set-CsTeamsAIPolicy -Identity  
Global -EnrollVoice Enabled
```

3. Enable speaker recognition on Teams Rooms

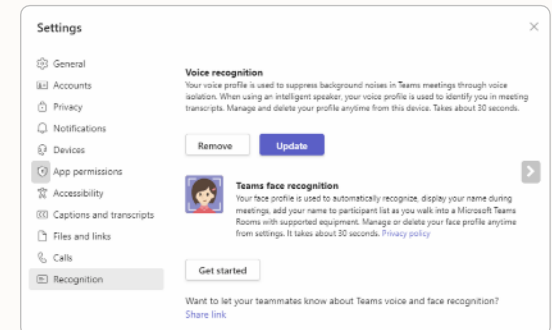

Set meeting policy to control the voice-based user identification in meeting rooms and check meeting transcription setting

Powershell

```
Set-CsTeamsMeetingPolicy -  
Identity Global -  
roomAttributeUserOverride  
Attribute -  
RoomPeopleNameUserOverride  
On -AllowTranscription $true
```

4. Users setup and record their voice profile in Teams app

Users must go into the Microsoft Teams app to Settings > Recognition to get started by enrolling their voice.

IT Admin

User

1. IT Admin: Teams Rooms requirements

Verify Teams Rooms speaker recognition requirements

Speaker recognition requirements and recommendations

- ☐ Room resource account should have a Teams Room Pro license assigned.
- ☐ A supported Teams Rooms app is required to support intelligent Speakers to work with all certified microphones. Please check the software release notes [here](#)
- ☐ For identification to work, the participant being identified needs to be enrolled with their voice profile and invited to the scheduled Teams meeting.
- ☐ The current maximum number of invited participants is 20 for identification to work.
- ☐ Evaluate existing hardware or incorporate a certified intelligent speaker

Evaluate existing hardware or incorporate a certified intelligent speaker

When you have activated Intelligent Speaker for your Microsoft Teams Rooms, the meeting transcript is able to not only distinguish between different speakers in the room, but also identify them and attribute them to the correct person. Speaker recognition enables critical use cases for Copilot and intelligent recap.

Option 1: Existing Hardware *(available on all Teams Rooms devices)*

- Speaker recognition is available for all microphones connected to a Teams Rooms device
- While you can extend the capability of speaker recognition to more rooms, it's important to note the quality may not match that of an intelligent speaker certified device.

Option 2: Certified Intelligent speakers

- Speaker recognition is enabled by intelligent speakers certified for Teams. Certified intelligent speakers are designed with multiple microphones to provide high-quality audio, maximize accuracy in recognition and transcription, and boast an industry-leading reduction of what is referred to as 'word error rate'.
- Please refer to the [intelligent speaker certified Hardware](#) list for Intelligent speaker support.

It's essential to evaluate the advantages of incorporating a certified intelligent speaker, especially in crucial spaces where attaining the highest quality transcription and attribution is vital.

2. IT Admin:

Verify voice enrollment in Microsoft Teams for users is turned on

Overview: Voice and face enrollment in Microsoft Teams

Voice and face enrollment is a feature in Microsoft Teams that allows users to create a voice and face profile. Voice and face enrollment is used to improve the audio quality and user experience of Teams meetings and calls.

This feature helps to

- Enable [voice isolation](#) to reduce background noise and secondary speakers
- Provides speaker attribution for Microsoft Copilot accuracy in meeting rooms equipped with Microsoft Teams Rooms devices.

Admins and security teams can manage and control this feature and ensure for which user the enrollment and usage of the profile are turned on.

Users have full control over their voice and face data and can choose to stay enrolled or unenroll their profiles at any time through their desktop client, even if admins have disabled enrollment after the user has enrolled.

Admin settings: Turn on voice and face enrollment

By default, voice and face enrollment is enabled for all users in the organization, but admins can change this setting using PowerShell.

- Please connect to PowerShell and ensure you're running the latest version. For detailed instructions and the update command, refer to the Install [Microsoft Teams PowerShell](#) article.
- Admins can now manage voice and face enrollment using the new [csTeamsAIPolicy](#), which is the current and only supported policy for this capability in Microsoft Teams. *This policy is accessible exclusively via Microsoft PowerShell and replaces the previous EnrollUserOverride setting in csTeamsMeetingPolicy.*
- The new Teams AI policy includes two distinct settings:
 - EnrollVoice: *[Enabled by default]*
 - EnrollFace: *[Enabled by default]*

Admins can turn on or off voice and face enrollment for specific users, or groups using the [Teams AI policy](#). By default, voice and face enrollment is enabled for all users in the organization.

 **If voice enrollment is disabled, this results in users not being able to enroll their voice profile in Teams and therefore can not be identified using speaker recognition in Teams Rooms.**

PowerShell Admin Controls: Verify voice enrollment is turned on

By default, voice and face enrollment is enabled for all users in the organization but should be verified.

1. Get Teams AI policies

Retrieves all Teams AI policies for the tenant.

Admin Settings

Powershell

`Get-CsTeamsAIPolicy`

Identity : Global

Description :

EnrollFace : Enabled

EnrollVoice : Enabled

SpeakerAttributionForBYOD : Enabled

Retrieves Teams AI policies and shows "EnrollFace", "EnrollVoice" and "SpeakerAttributionBYOD" values.

2. IT admin action

Verify Teams AI Policy for users

-EnrollVoice must be set to "Enabled"

Policy value of the -EnrollVoice controls user access to user voice enrollment in the Teams app settings. If disabled users can not enroll their voice in Teams.

3. IT Admin:

Enable speaker recognition and transcription on Teams Rooms accounts

PowerShell Admin Controls: Set meeting policy to control the voice-based user identification in meeting rooms.

Required

Teams Rooms account meeting policy

Control the voice-based user identification in meeting rooms.

Admin Settings

Powershell

```
Set-CsTeamsMeetingPolicy -Identity Global -roomAttributeUserOverride Attribute  
-RoomPeopleNameUserOverride On -AllowTranscription $true
```

Enable in Global Teams meeting policy or in individual Meeting Policy
-> Assign to Microsoft Teams Room account

- roomAttributeUserOverride [Attribute]
- RoomPeopleNameUserOverride [On]
- AllowTranscription [On]

Set meeting policy to control the voice-based user identification in meeting rooms.

Policy value	Description	Values and Behavior
-RoomAttributeUserOverride	Control the voice-based user identification in meeting rooms. This setting is required for Rooms accounts, and BYOD user accounts.	Attribute - Rooms users will be attributed based on their enrollment status. - Users who are enrolled are shown with their name in the transcription. - Users who aren't enrolled show as Speaker.
-RoomPeopleNameUserOverride	Enabling people recognition requires the tenant CsTeamsMeetingPolicy roomPeopleNameUserOverride to be "On" and roomAttributeUserOverride to be Attribute for allowing individual voice and face profiles to be used for recognition in meetings.	On: - Policy value allows People recognition option on Microsoft Teams Rooms under call control bar.
-AllowTranscription	Required for BYOD user and Teams Room accounts.	True - Policy value allows real time or post meeting captions and transcriptions.

4. Users

Create voice profile in Microsoft Teams app

Overview: Voice and face recognition profiles in Teams app

Users must set up a voice profile in the Teams app to be identified in the transcript.

Each person who is attending in the meeting room (as opposed to remotely) sets up their digital voice profile in the Teams app so that they'll be identified in the transcription.

The screenshot shows the 'AI notes' tab in the Microsoft Teams app. At the top, there are tabs for 'Notes', 'AI notes' (selected), '@ Mentions (3)', and 'Transcript'. Below the tabs, a message says 'Generated by AI. Be sure to check for accuracy.' with a 'Copy all' button. The 'Meeting notes' section contains three bullet points. The first bullet point, 'Feature commitment: Conf room 1245 wants to look at the product roadmap before they and Danielle commit to more feature enhancements.', is highlighted with a red dashed box. The other two bullet points are 'Beta testing results' and 'Managing capacity'. At the bottom, there is a feedback prompt: 'Are these notes useful?' with thumbs up and down icons.

✗ Without speaker recognition set up, audio will be attributed to the room in AI notes.

The screenshot shows the 'AI notes' tab in the Microsoft Teams app, similar to the previous one. The 'Meeting notes' section contains three bullet points. The first bullet point, 'Feature commitment: Mona wants to look at the product roadmap before she and Danielle commit to more feature enhancements.', is highlighted with a green dashed box. The other two bullet points are 'Beta testing results' and 'Managing capacity'. At the bottom, there is a feedback prompt: 'Are these notes useful?' with thumbs up and down icons.

✓ With speaker recognition set up, individuals in the conference room will each be attributed by name in AI notes.

Users: Set up voice profile in Teams app

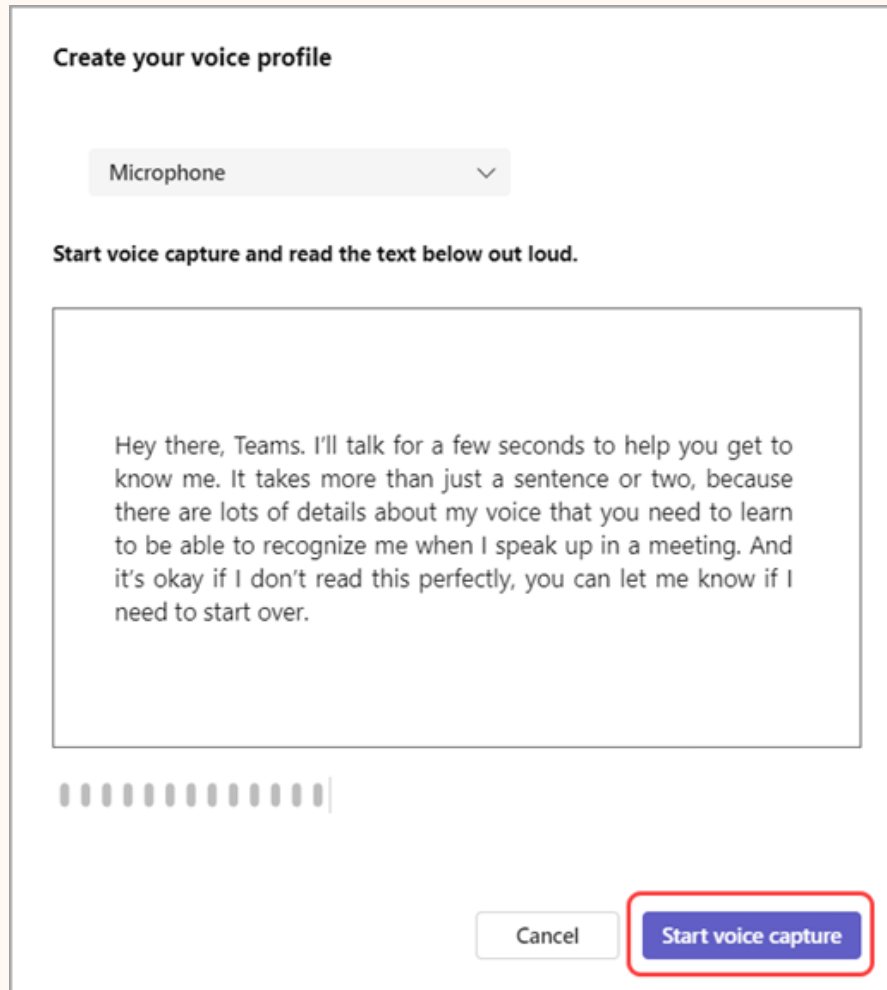

To set up your voice profile, you can use the desktop version of Teams on a Windows or Mac device.

Before creating a voice profile, [make sure your language is supported in Teams](#).

To create a voice profile

1. In Teams, select **Settings and more** > **Settings** > **Recognition**.
2. Select **Create voice profile**.
3. Make sure your mic is selected from the device dropdown menu.
4. Select **Start voice capture** and read the text.
5. Select **End voice capture** when you're done.
6. You can start [face recognition setup](#) right after you're done creating your voice profile, or select **Close**.

✓ **Additional, after enrolling their voice users will also benefit from Voice isolation in calls and meetings**

Create your voice profile

Microphone ▼

Start voice capture and read the text below out loud.

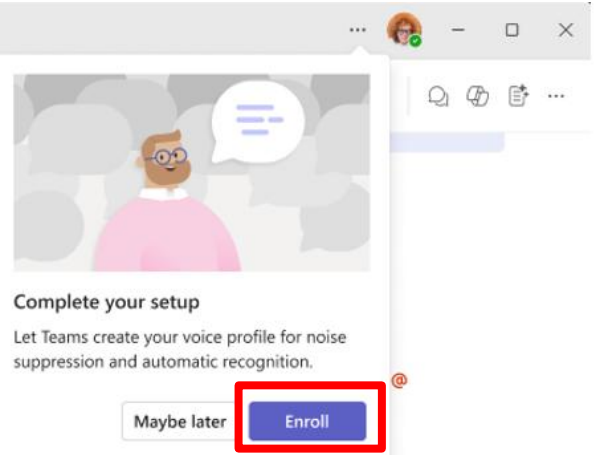

Hey there, Teams. I'll talk for a few seconds to help you get to know me. It takes more than just a sentence or two, because there are lots of details about my voice that you need to learn to be able to recognize me when I speak up in a meeting. And it's okay if I don't read this perfectly, you can let me know if I need to start over.

Progress indicator: 11 bars, 10 filled, 1 empty.

Cancel Start voice capture

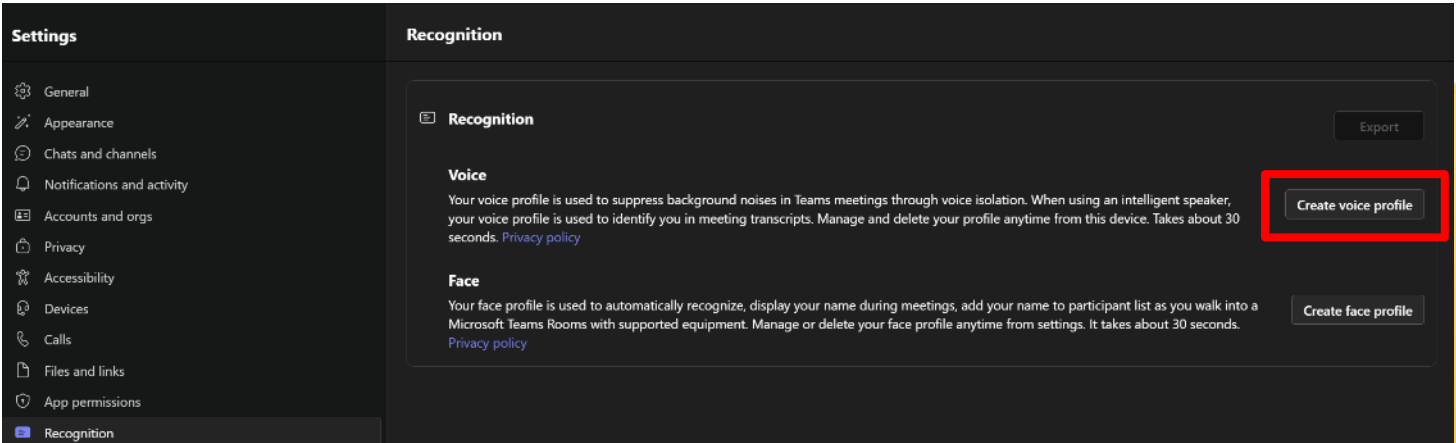

Note: The Recognition Teams settings will only be displayed if a user has voice enrollment is enabled in a Teams AI Policy.

Users experience: Voice enrollment turned on | Voice not enrolled

User gets notification two times at least 7 days apart in Microsoft Teams app to Enroll their voice to complete setup

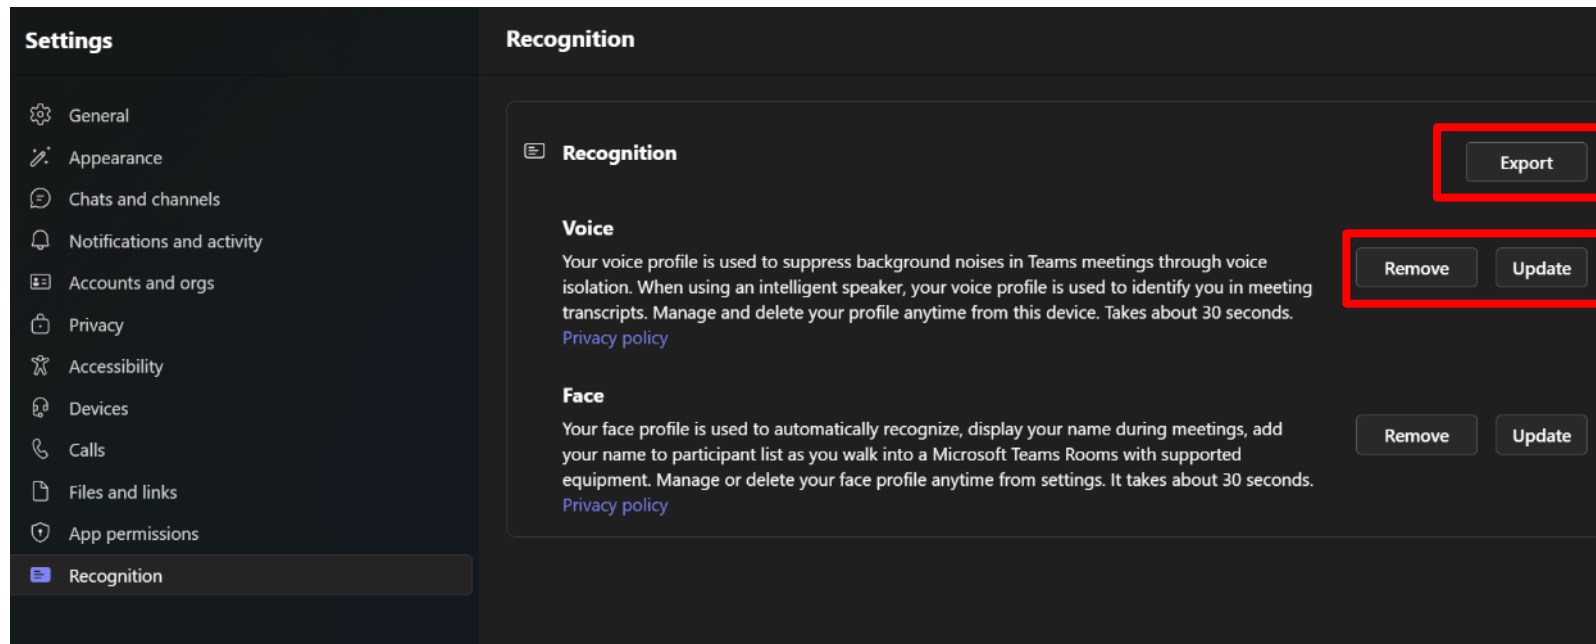

User required to click "Create voice profile"

Note: *Create voice profile* will only be displayed if a user has voice enrollment enabled in a Teams AI Policy.

Users experience: Voice enrollment turned on  | Voice enrolled 

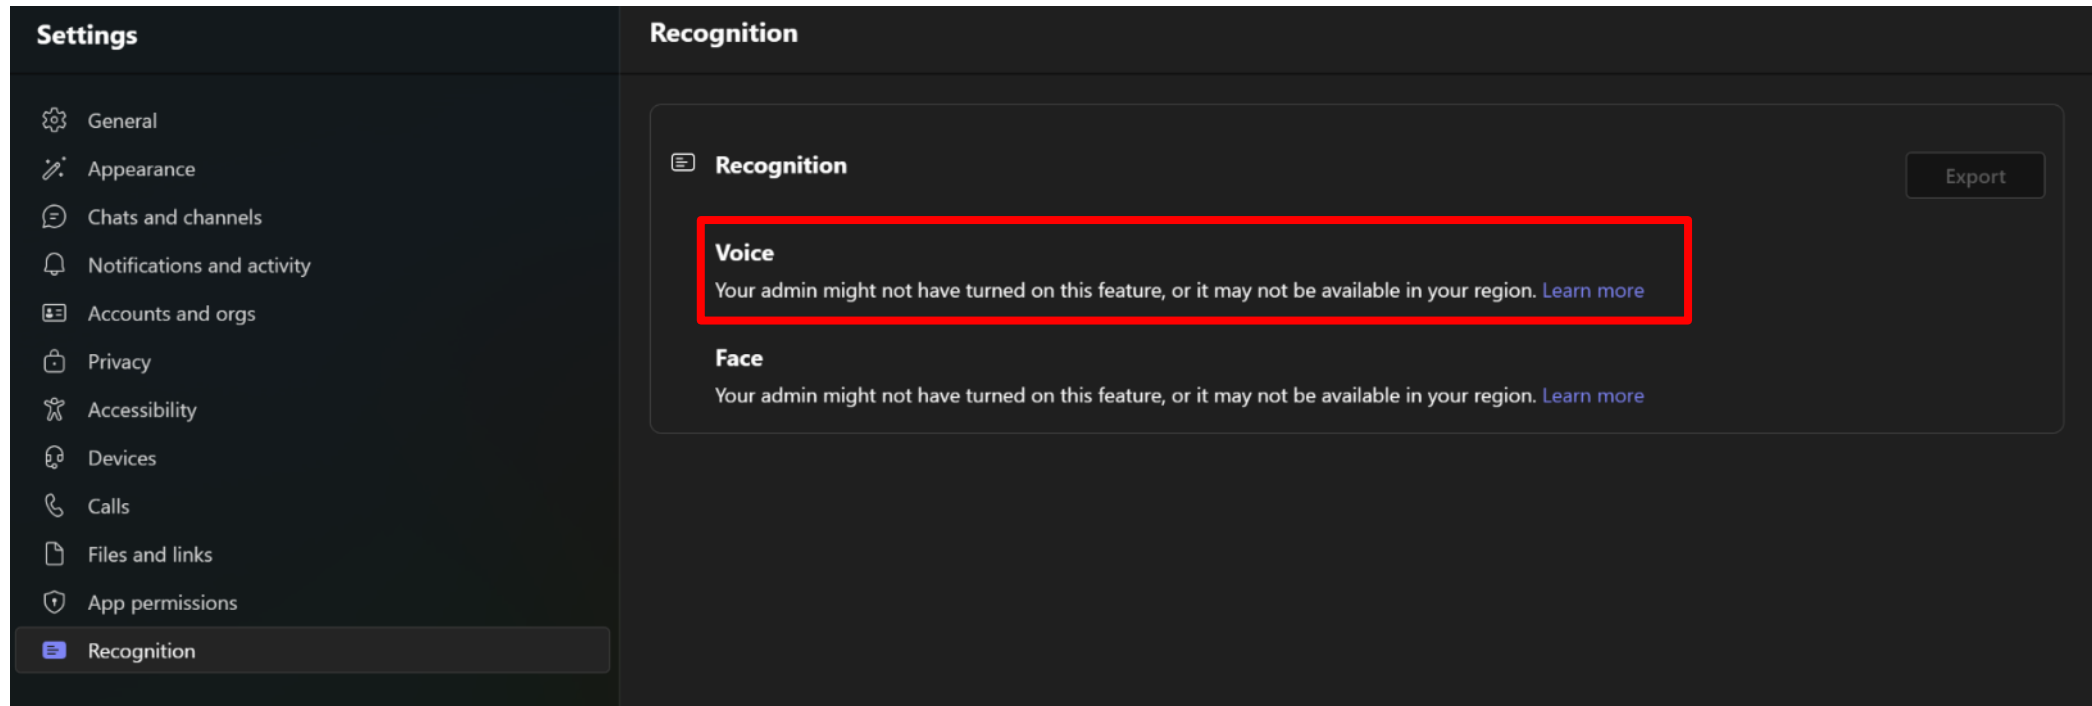

User stays in full control and can remove, update and export at any time

Note: Create, update and remove voice profile will only be displayed if a user has voice enrollment enabled in a Teams AI Policy.

Users experience: Voice enrollment turned Off ❌ | Voice cannot be enrolled ❌

"Your admin might not have turned on this feature"
message displayed to users

Note: Create voice profile will only be displayed if a user has voice enrollment enabled in a Teams AI Policy.

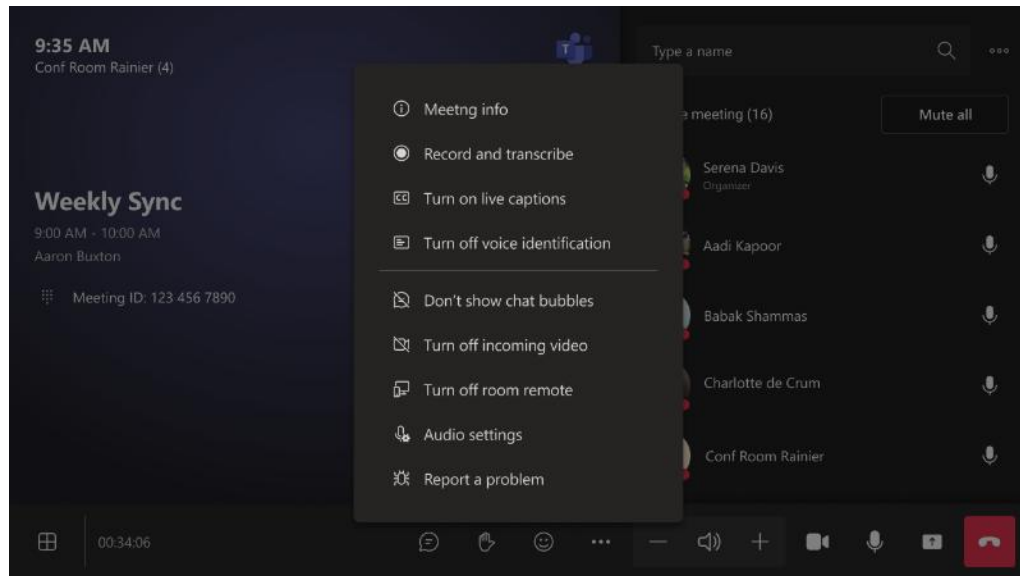

Teams Meeting requirements to use speaker recognition in Teams Rooms

Teams meeting requirements to use speaker recognition in Teams Rooms

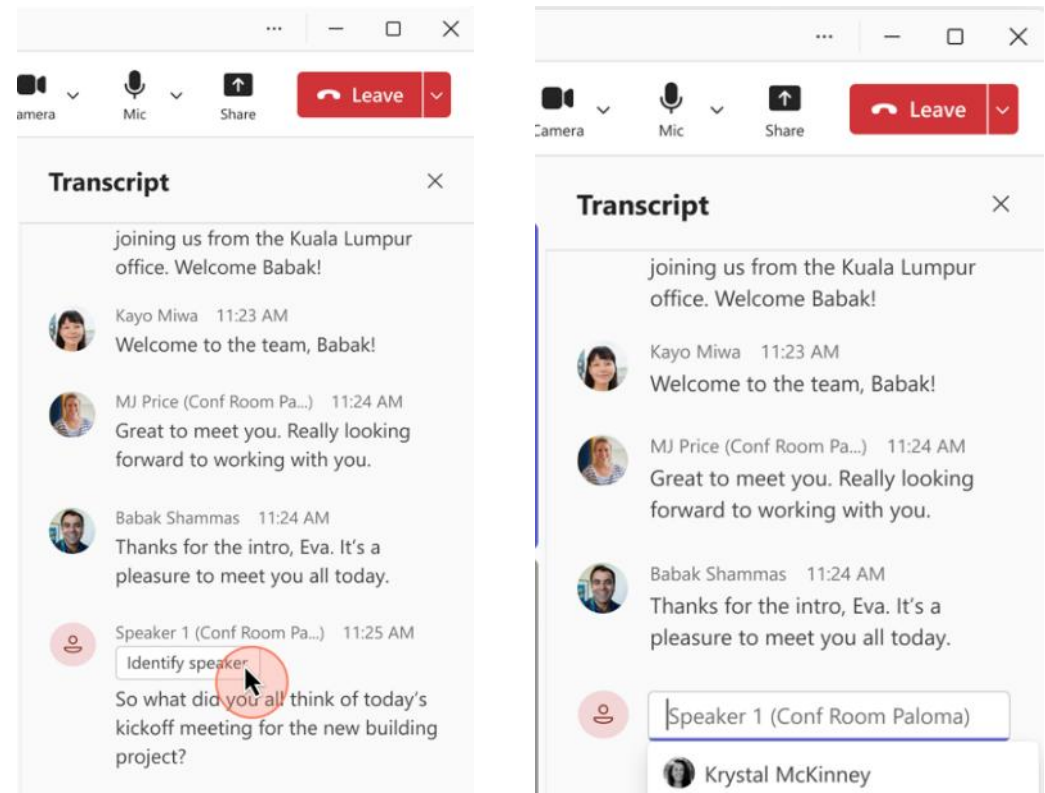

- Use a Teams Rooms device that is setup with Speaker recognition and voice attribution turned on.
- Each meeting attendee must be invited individually, either on the original invite or through a forwarded invitation.
- People to be identified in the room, need to be enrolled with their [voice profile](#).
- The limitation for people invited with voice profile is currently 20.
- Copilot with meeting transcript enabled to use Copilot during and after a Teams meeting for intelligent recaps. More information [here](#)
- Users requiring Intelligent meeting recaps must be licensed for Microsoft 365 Copilot or Teams Premium.
- Users require *"Automatically identify me in meeting captions and transcripts"* turned On in Teams app settings so users will be identified in meetings. (By default, this is turned on at the organization level (Global (Org-wide default) policy). This can be set by meetings policy using [speaker attribution mode](#) parameter if it was disabled.

Users in meeting experience: Stay in control during the meeting

Disable/Enable Attribution from Teams Room console

Correct attribution in transcript if needed

Facilitator agent for Teams Rooms

Facilitator takes real-time notes from the room **even without a scheduled Teams meeting.**

Public Preview

Facilitator agent in Teams and Teams Rooms video

Important information

Facilitator in Teams Rooms depends on setting up facilitator in Microsoft Teams [first](#) This feature is currently in Teams Public preview and subject to change.

- **Teams Rooms on Windows public preview** - Currently Facilitator is available only as Public Preview on Teams Rooms on Windows and it's projected to release to Teams Rooms on Android at a later date.
- **Loop** - AI-generated notes for all meetings are created by Facilitator are stored as a .loop file in a OneDrive folder titled **Meetings** of the user who initiated Facilitator in Teams. This data is treated as meeting transcript data.
- **Transcription** - The Facilitator agent only turns on transcription during the meeting. The meeting won't be recorded.
- **Meeting Room participant identification (Unscheduled meeting)** - Currently, only the person who scans the QR code to invite Facilitator is identified and attributed if they've enrolled their profile. Identity and attribution support for other room participants is coming at a later date.

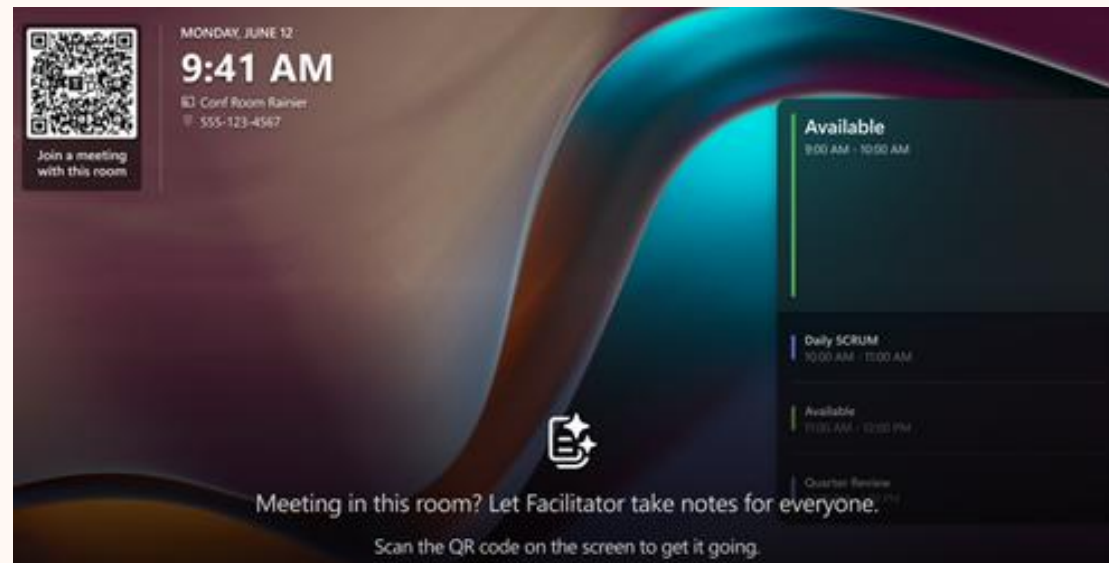

[Facilitator in Teams Rooms - Microsoft Teams | Microsoft Learn](#)

Setup facilitator in Teams Rooms

When you're setting up Facilitator in Teams and Teams Rooms, there are steps that you need to perform to enable it for scheduled meetings but there are also steps you need to follow for adhoc or unscheduled meetings to be able to use AI-generated notes, summaries, and action items.

Microsoft 365 Copilot licensing (Scheduled vs unscheduled meetings)

- **Facilitator for Scheduled meetings** - A Microsoft 365 Copilot license is required to use facilitator
- **Facilitator for unscheduled meetings in Teams Rooms** - In preview a Microsoft 365 Copilot license is not currently required but this is subject to change at anytime.

Facilitator for scheduled meetings

To enable AI-generated notes using Facilitator for Teams meetings:

Step 1: Turn on Facilitator for meetings

Step 1: Turn on Facilitator for meetings

See, [Set up Facilitator in Microsoft Teams](#).

This includes the steps to

- 1) *Assign Microsoft 365 base licenses, Teams license, Microsoft 365 Copilot license to users that want to use Facilitator in Teams for AI notes, summaries, and action items for scheduled meetings.*
- 2) *Be a [Microsoft Teams Public preview participant](#).*

Step 2: Turn on and enable Loop

Step 2: Turn on and enable Loop

Enable Loop experiences in Teams for AI-generated notes: [Manage Loop components in your organization](#)

Enable Loop experiences in Teams for AI-generated notes

AI-generated notes for all meetings are created by Facilitator are stored as a .loop file in a OneDrive folder titled **Meetings** of the user who initiated Facilitator in Teams. This data is treated as meeting transcript data.

Facilitator for unscheduled meetings in Teams Rooms setup steps

To enable AI-generated notes using Facilitator in Teams Rooms

Step 1: Assign a Teams Rooms Pro license

Assign a Teams Rooms Pro license

To each resource account you have for your Teams Rooms devices.

For more information, see, [Microsoft Teams Rooms licenses](#).

Step 2: Turn on Facilitator for Teams Rooms

Turn on Facilitator for Teams Rooms

In the Microsoft Teams Rooms Management portal, go to **Room** > **Settings** > **Meeting** > **Facilitator QR Code** and toggle it on.

For more information, see [Set up Facilitator in Microsoft Teams](#).

Step 3: Turn on Public Preview of Microsoft Teams Rooms

Turn on Public Preview of Microsoft Teams Rooms

In the Microsoft Teams Rooms Management portal, go to **Room** > **Settings** > **Account** > **Enable public preview** and toggle it on.

For more information, see [Pro Management Portal](#)

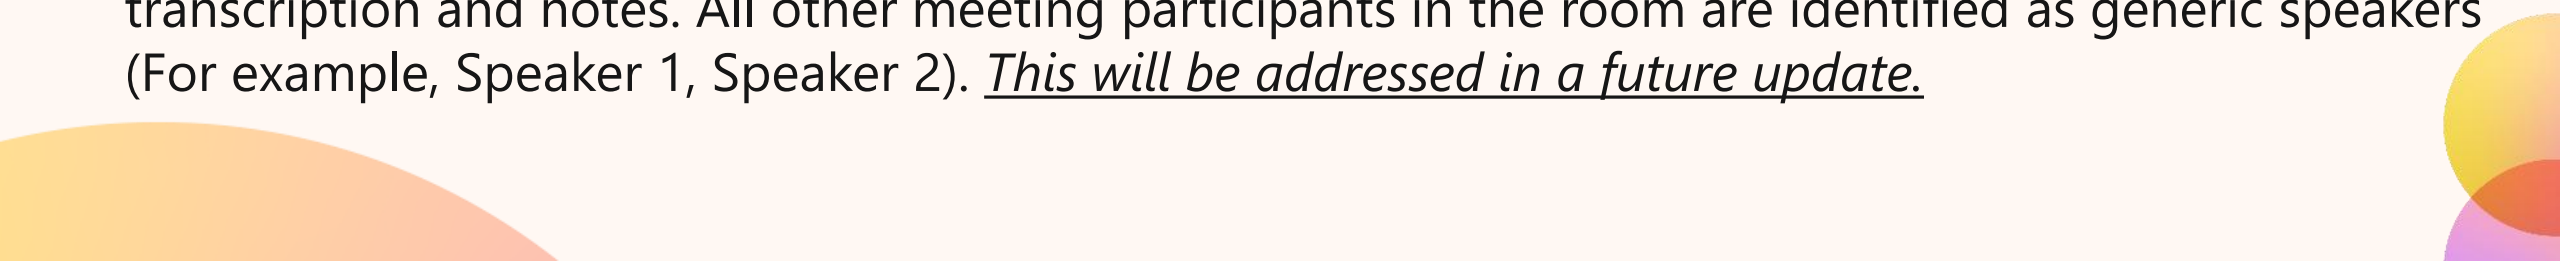

Facilitator in Teams Rooms unscheduled meetings: Overview

When a Teams Room console is available in a room and a user wants to have an unscheduled meeting, such as adhoc, 1:1 (peer to peer), or group in-person, the meeting participants can use Facilitator in Teams Rooms and create rich AI notes with summaries, action items, containing speaker attribution.

Note: Facilitator in Teams Rooms must be started by one of the persons in the room who's signed into Teams on their mobile phone within the same organization. *Facilitator based offline note taking isn't available for federated or external users.*

Once facilitator has been invited to the in person meeting, remote users can be added to the meeting once it's started. You can invite remote participants by looking them up on the Teams Room console.

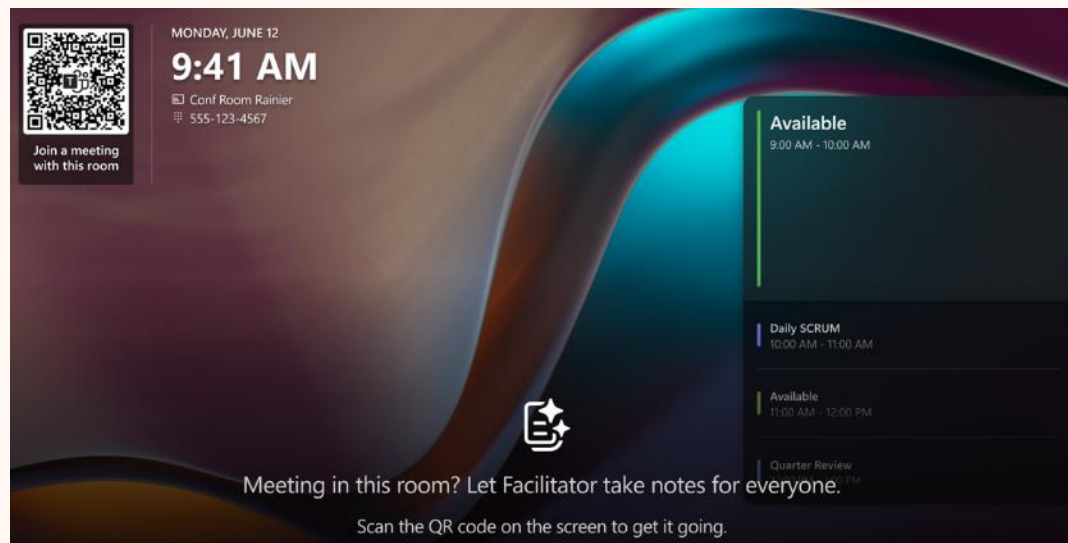

Important - Currently, only the user who scans the QR code to start the meeting is attributed in the transcription and notes. All other meeting participants in the room are identified as generic speakers (For example, Speaker 1, Speaker 2). *This will be addressed in a future update.*

Facilitator in Teams Rooms unscheduled meeting experience

After you perform all of the required steps and the prerequisites have been met, meeting participants will see an icon for Facilitator added to their Teams app and the QR code for Facilitator will be available on the Teams Rooms console.

When one or more users see that a meeting room is available, and they want to start an unscheduled meeting with Teams Rooms, the presence detector on Teams Rooms will wake up, a banner is displayed on the room display, and it will inform users that they can invite Facilitator to take notes for their meeting. This banner appears when there's no scheduled meeting and the room is available for the next 10 minutes.

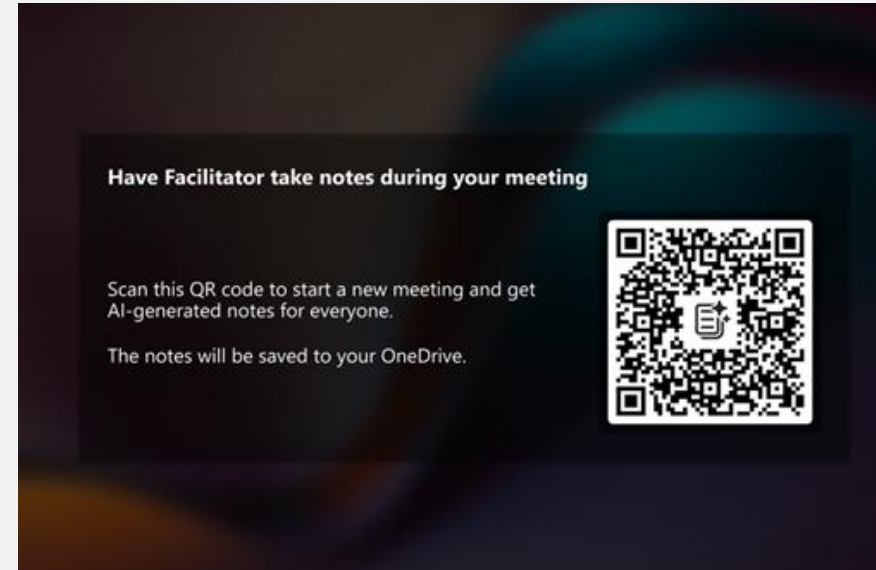

Inviting Facilitator for note taking

To invite the Facilitator agent to take notes:

- Scan the QR code on the top left of the display
- Press **Facilitator** on the home screen of the Teams Rooms console and scan the QR code shown with a mobile device.

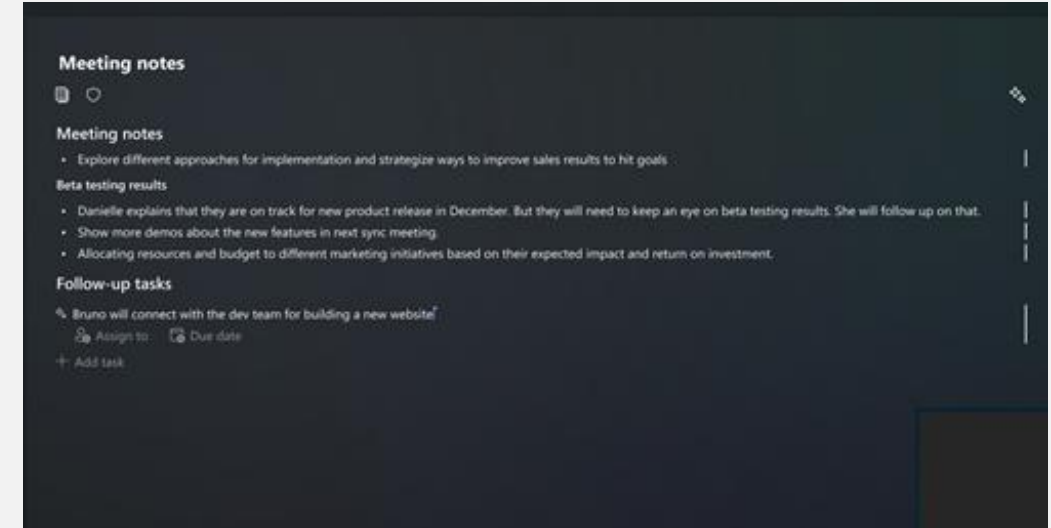

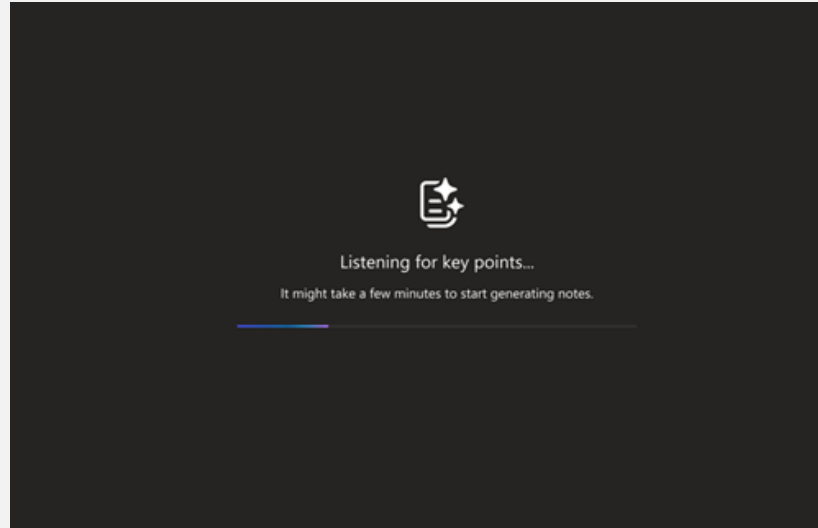

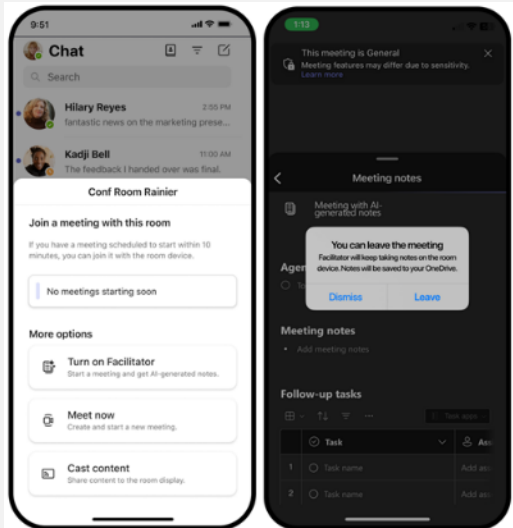

After scanning the QR code on your mobile device, the Teams app will show an option to invite Facilitator with the room as the attendee.

There are other options that are available in the list for you to choose from as well.

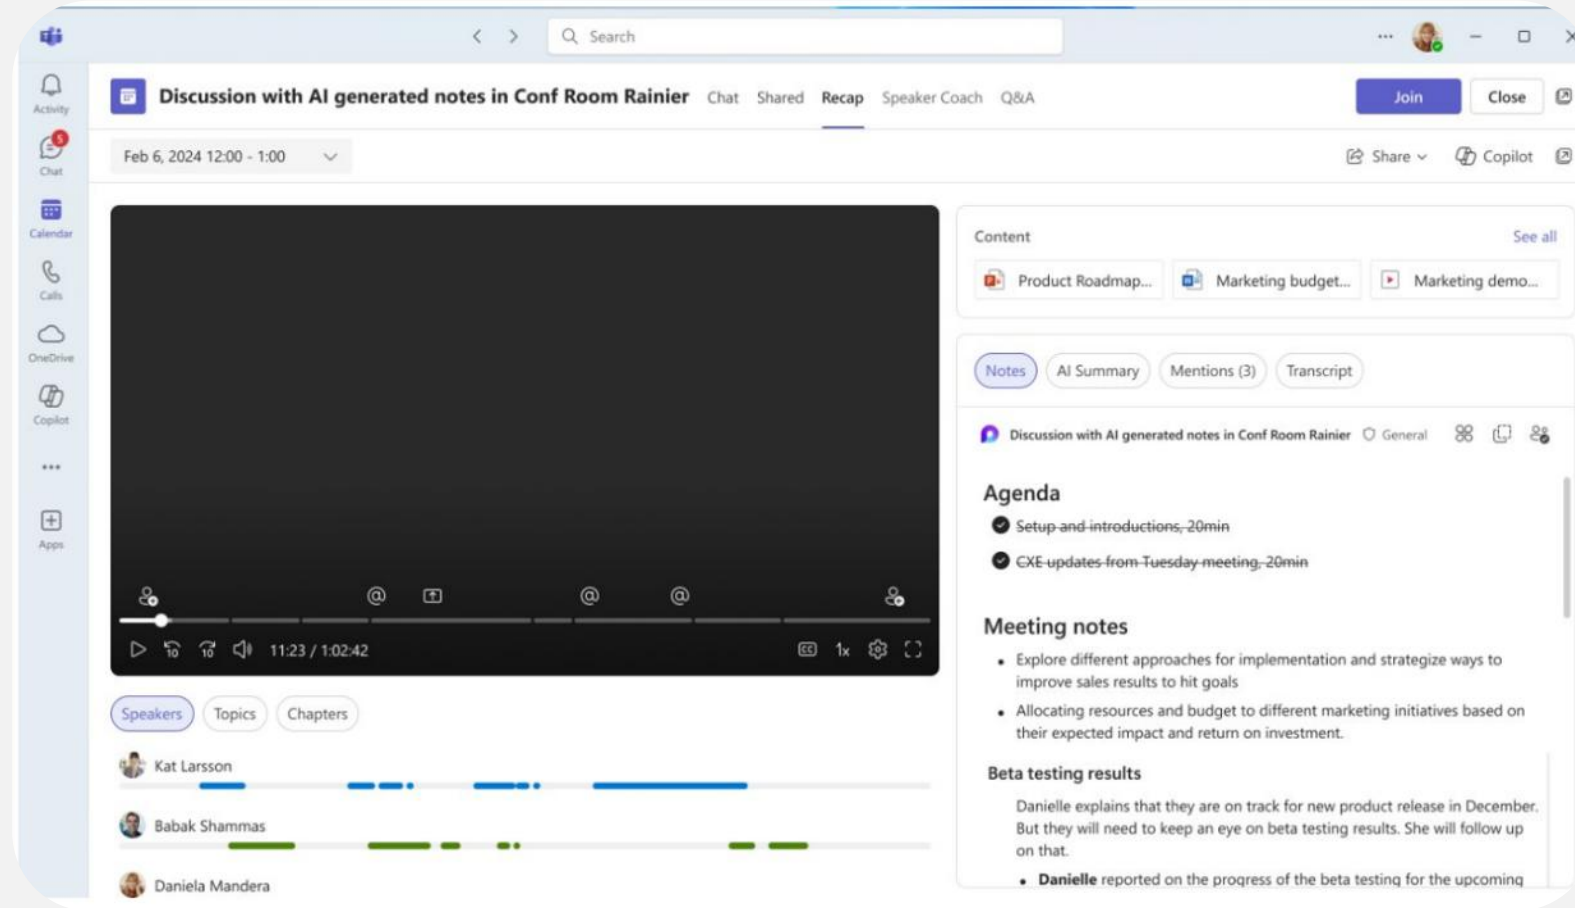

Facilitator in Teams Rooms Meeting experience

- The meeting starts with the Teams Rooms invited and transcription is turned on.
- The display for the Teams Rooms indicates that Facilitator is listening to the conversation and taking notes.
- After a few minutes, the screen will display notes and start summarizing the discussion.
- These notes continue to automatically update based on the ongoing conversation with the meeting participants.
- To end the meeting, use the **End** button on the Teams Room.

Accessing notes

To access the notes after the meeting, navigate to the **Recap** section in your Teams calendar or chat. The meeting is titled **Discussion with AI-generated notes in**.

THANK YOU

aka.ms/TeamsRooms

Calls to action

- 1 Deploy Speaker recognition for Teams Rooms and enroll your voice in Teams app
- 2 Join the Teams public preview and try the facilitator agent in Teams and Teams Rooms
- 3 Raise awareness of Copilot blind spots and the importance of identifying speakers meeting spaces through speaker recognition

Voice Isolation

Keep the focus on the conversation and be heard in all of your Teams meetings.

Teams recognizes your voice and suppresses other voices to ensure you're the only one to be heard.

While noise suppression masks out background noise, voice isolation filters out other voices as well.

Generally available
